Imperfection Removal

BUFLEX DRY
K2000 - K3000
Finishing

K2IN1
Polishing

After removing surface irregularities and imperfections, we recommend using Buflex Dry to **refine any last scratches**. Depending on the colour, choose your Buflex Dry grit. At light colours (like white and grey) it is possible to only use Buflex Dry K2500 before polishing (after having cut the nip with Tolecut), which is the ideal combination of cutting power & a fine sanding result. For dark colours, we recommend to start with Buflex Dry K2000 and/or K2500 and finish with K3000 before starting with polishing.

The extremely fine sanding pattern of Buflex Dry **reduces the work-intensive polishing time**. With light coloured coatings a perfect finish can be achieved in just one step, with the K2in1 rubbing polish compound. For dark colours we recommend to use the K2 polish compound after K2in1, for a glossy and hologram-free surface.

Grit	152 MM - 15H	125 MM - 7H	75 MM	130 x 170 MM	*Application
K2000	193-1565	195-1535	730-1513	191-1532	
K2500	193-1562		730-1515	191-1534	
K3000	193-1564	195-1534	730-1514	191-1531	

*See other side for meaning application icon.

FOR THE PERFECT
FINISH, USE THE **K2IN1**
POLISH COMPOUND
AND **K2 POLISH**
COMPOUND.

ALWAYS USE
BUFLEX DRY IN
COMBINATION WITH
THE **FEMALE-FEMALE**
VELCRO INTERFACE
PADS.
